

UNIVERSITY OF TRNAVA - VERIFICATION

Dated at Herisau, 11. September, 1998

Registrar's Office
For the Municipality of Herisau
The Registrar

By Order
(Signed) BALINE

On 8 and 9 September 1998, seven patients were seen at the Saint Elisabeth Institute of Oncology at Bratislava and the Oncology Unit of the Hospital at Trnava, respectively, in the presence of the Deputy Vice Chancellor of the University of Trnava, the Dean of the Faculty of Nursing and Social Science, and ten other Professors and Lecturers. The said seven patients presented with 20 particular medical conditions (Dr. Hamer prepared minutes of the examination of such patients, which are attached hereto). The objective was to establish whether his system of medicine could be verified by using a scientific method to show that his results are repeatable. This has been the case.

Pursuant to the rules of "New Medicine" each and every particular disease can be tested for about 100 different facts. Due to incomplete medical test results not all such 100 facts could be tested for. However, those facts which could be tested, indicated that all natural laws of the "New Medicine" which are the foundation of the "New Medicine" were valid.

His system was put to the test at the said two conferences. The undersigned are of the view that the validity of the system was sufficiently proven with a high of probability.

We value very highly Dr Hamer's humanity, his ethical and caring attitude toward the patient and the new holistic approach to the patient. Considering all such factors, we have gained the impression that the question, as to how the "New Medicine" could be applied as soon as possible, should be given attention.
